Snapshots of the sample data ChatGPT created for me

For this project, I prompted ChatGPT to create a relational database using similar data to what I might be working with if I was in a BI Analyst role. The schema is attached in a separate file. Below, find snapshots of the first 10 rows of each table to get a better idea of the data I was working with. *Note - the constituents, gifts, and gift_allocations tables were intentionally expanded to make the results more realistic.

Table Name: funds (5 rows)

fund_id	fund_code	name	description
1	ANNUAL	Annual Fund	Unrestricted annual giving
